How to Collect Semen Samples

ABBA

Collecting the Sample

Step 1 Remove the semen straw from the semen tank and allow it to thaw completely.

Step 2 Locate the Private Herd Number that is written on the Hair sample collector and ensure it matches the Semen Straw.

Step 3 Open the hair sample collector completely and place the Semen Straw on the back of the printed flap as shown. Peel off the backing paper, starting at the joined end, and expose the adhesive.

Step 4 Press the sticky side down onto the Semen Straw, ensuring that it is completely sealed.

Step 5 Ensure the Semen Straw is packaged well to ensure it does not break in transit to the lab.
